Nalytics News and Industry Insights

OUR NEW SAR's OFFERING

We have some exciting news to announce for anyone involved in the preparation of responses to Data Subject Access Requests (DSARs)...we have been busy working on, and are in line to release our new SARs offering - Nalytics SARs 2.0 - this summer.

There has been a tremendously positive response to our existing version of Nalytics SARs, with our customers finding it an invaluable tool in their quest to produce fast, accurate and compliant responses to Subject Access Requests.

Encouraged by this success, and with the aim of expanding the capabilities and enhancing the user experience, we are producing a new and improved Nalytics SARs solution. We have listened to your suggestions for changes and additions to make Nalytics SARs even more valuable in your SAR response process.

The changes you will find in Nalytics SARs 2.0 include, a makeover of the user interface. The clean and intuitive design accelerates user adoption and minimises training needs. Easy to interpret menus provide access to all stages of the SARs process. Breadcrumbs and Status Markers provide context and an easy means of navigation. Expanded document tagging enables document classification, e.g. to mark a document as containing legally privileged information or as requiring clarification. Our already powerful, redaction capabilities have been extended to facilitate redaction at both document and data set levels. These are just a few of the enhancements you will see in Nalytics SARs 2.

Sneak peak

Thorntons Law has adopted Nalytics SAR's

Thorntons are now using our new SAR's platform to help fulfill their GDPR SAR compliance obligations.

Thorntons will be jointly presenting our DSAR's Briefing on August 6th.

OUR RECENT RPA WEBINAR

There is much buzz in the IT industry and a growing demand for what Gartner have identified as the top trending technology for 2020 “Hyper automation”. Also known as RPA or Robotic Process Automation, this is basically technology for automating repetitive computer-oriented tasks.

We are seeing a growing demand for this type of service across the UK and Europe and which complements and provides an opening to introduce our unstructured data analysis and processing with Nalytics as well.
